

**APPENDIX:**

The Appendix includes the following item(s):

- ☒ - a new or amended Abstract of the Disclosure

## ABSTRACT OF THE DISCLOSURE

An air filtering device and a method of producing the device. The device is constructed from a number of modules of a first module type (4) and a second module type (6), which are arranged in series in a row. A module of the first module type (4) is arranged as an inlet module (4) with inlets (42), which is connected in series to modules (8, 10: 16) of the second module type (6). One of the latter may include a fan element (18) or one or more filter elements (12, 14), and one of them is arranged as an outlet module (16) and others as through-flow modules (8, 10). The modules are joined together by locking members (32) arranged in each module, in such a way that the modules create an enclosed air duct (4, 8, 10, 16).
